

## **Using PPE at home**

## Objective

Discuss the importance of using appropriate personal protective equipment (PPE) at home. **Background:** Most school districts require staff to wear personal protective equipment (PPE) when performing specific tasks, such as eye protection when operating a metal shop lathe or hearing protection when operating a grass mower.

However, people often don't wear PPE when doing similar tasks at home.

**Ask:** What are some tasks people perform at home that would be safer with PPE?

- Using string trimmers: Wear safety glasses, a face shield, ear protection (for a gas-powered model), long-sleeve shirt, and pants.
- Using table saws or chop saws: Wear safety glasses and hearing protection.
- Using a chain saw: Wear chaps, safety glasses, hearing protection, hard hat, and boots.
- Using chemical cleaners: Wear protective gloves and safety glasses or goggles (depending on the splash hazard and hazards associated with the chemical).

- Doing general yard work such as dragging brush: Wear leather gloves, long pants, and closed-toe shoes.
- Using herbicides: Follow the manufacturer's recommendation for the chemical. This often will include long-sleeve shirt and pants, appropriate gloves, and eye protection.
- Handling wooden crates or materials for wood shop: Wear leather gloves.
- Weeding while kneeling on concrete or on hard, rocky packed ground: Use a foam pad or wear knee pads.
- Cleaning up blood spills and other body fluids: Wear nitrile (or similar) exam gloves and, depending on task, eyewear, and an impermeable apron.

**Ask:** Do you have PPE at home for these tasks? Is it in good repair?

**Ask:** Any safety concerns or suggestions?
