Elements of a Safety and Health Program

Management leadership
Creates a culture of safety, facilitates trust, and reinforces the core elements.

Worker participation
Results in a better design, implementation, and evaluation.

Hazard identification and assessment
Identifies and documents all known suspected hazards.

Hazard prevention and control
Prevents injuries using hierarchy of controls: engineering, work practices, administrative, PPE.

Education and training
Ensures all workers understand safety work practices, are familiar with hazers, and know how to participate.

Program evaluation and improvement
Assesses program effectiveness and modifications as needed.

Multi-employer worksites
Ensures communication and cooperation to protect all workers on site.
